

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

that eat the Mortar, which keep not above eight dayes alive. I have observed all their parts with a very good *Microscope*, without which, and a great deal of attention, 'tis difficult to see them well.

I have seen other very old Walls altogether eaten, as those of the *Temple at Paris*, where I could find no Worms, but the Cavities were full of Shells of various kinds, diversly figur'd and turn'd : all which I believe to be little Animals petrified.

Some promiscuous Observations, made in Somersfet-shire, and imparted by the above-mention'd Dr. Beale.

His words are these, in a Letter to the *Publisher*, of the 24. *Septemb.* 1666. at *Yeovill in Somersfet-shire*;

I have two or three remarks, perhaps not unworthy to be recorded for further application in like caies of time and place.

1. In the Moores from hence towards *Fridgewater*, in the extreme drought, we have endured this Summer, some lengths of pasture grew much sooner withered and parched, than the other pasture. And this parched part seem'd to bear the length and shape (in grosse) of Trees. They digg'd, and found, in the place, *Oakes* indeed, as black as Ebony. And hence they have been instructed to find and take up many hundreds of *Oakes*, as a neighbour of good credit assures me. This advertisement may be instructive for other parts, as *Kent, Essex, Lincoln, &c.*

2. My Cosen *Philips* of *Montague* has in his pastures of *Socke*, about three miles off, a large Pool, to which Pigeons resort; but the Cattle will not drink of it, no not in the extream want of water in this drought. To the taste it is not only brackish, but hath other loathsome tastes. In a Venice-glass it looked greenish and clear, just like the most greenish Cider as soon as it is perfectly clarified. I boyl'd a Pint of it in a Posnet of Bell-Mettall (commonly used to preserve Sweatmeats :) suddenly it yeilded a thick froth, whence I scumm'd half a score Spoonfulls; of which the inclosed is a part. *Suffring the water to be boyl'd all away, it left much of the same on the sides and bottom of the Posnet.

* This had somewhat of a *Vitriolate* taste. But the Experiment being made with greater quantities of this water, which questionless will be done, the nature and kind of it may be better known.

3. From *Lamport*, towards *Bridge-water*, *Eeles* are so cheap in the frosts of Winter, that they vend them for little. Their abundance is from hence, that as the people walk, in the frosty Mornings, on the banks of the river, they discern, towards the edges of the banks, some parts *not hoare*, as the rest, but *green*; where searching the holes of the banks, they find heaps of *Eeles*.
